HOW TO READ THIS

Three kinds of fix, plus false alarms.

Document as an option	The page made a sensible variation. Add it to the master's documented options, and the section becomes a plain Instance with no page change.
Re-sync to the master	The change looks accidental or unnecessary. Restore the master's structure on the page, keeping the content.
Convert to another master	The section is really a different component. Swap it for an instance of that master.
No change needed	On a closer look the section is a clean instance; the scanner was too strict. It will show as Instance in the next audit.
