WHOLE BANKING, FINAL · DEVICE AUDIT · STEP 1

How every page holds up on phones, foldables, tablets and wide screens.

150 pages (75 English, 75 Arabic) loaded on 14 device sizes, from the 344px Galaxy Z Fold cover screen to a 2560px ultrawide. Nothing on the site was changed.

2100
page loads checked

2082
with no layout fault

4
distinct layout faults

50
phone loads with content under the browser bar

14 October 2026

Headless Chrome, device emulation

AFTER STEP 2 (14 OCTOBER 2026)

All 18 layout faults fixed; 0 remain.

The full audit was re-run on the same 2100 page loads after the step 2 fixes. Every fault in the pages that follow is now gone, and the first screens of the sample pages are unchanged on every device apart from video and animation frames.

What changed in the masters (ds.css)

- **Phone-safe screen heights.** 36 full-screen heights now use `svh` (the screen with browser bars showing), with `vh` kept as the fallback for older browsers. Pinned stages, heroes and scrolling card rows stay inside the visible area. Desktop is unchanged, since desktop browsers have no sliding bars.
- **Buttons never run off the edge.** A label too long for its space wraps inside the button. This also retires a non-standard 480px rule.
- **Long email addresses** break instead of running past a 344px screen.
- **Synced slider** grows to fit longer Arabic copy instead of clipping its stats.
- **Feature scroll story** switches to side by side on a short, wide screen (phone in landscape), sized by the stage itself.

How it stays fixed

- The gate now warns when a new rule sizes something by the screen height without the phone-safe unit.
- TESTING.md lists the foldable, landscape and ultrawide sizes to check.
- Browser bars cannot be simulated in a test browser: the browser-bar list on the following pages is resolved by the unit change, and should be confirmed once on a real iPhone and Android phone.

WHAT WE CHECKED

Four faults, measured on every page and device.

- **Runs past the screen edge.** Something wider than the screen. The site hides sideways scrolling, so the overflow is cut off rather than scrollable.
- **Text cut off inside its box.** A heading, label or button too long for the space it is given.
- **Content taller than a full-screen stage.** Pinned and full-height sections are exactly one screen tall; on short or squat screens their copy can spill out of the bottom.
- **Under the phone browser bar.** Full-screen sections use the old `vh` unit, which assumes the browser bars are hidden. With the bars showing (how every page first loads), the bottom ~90px is covered. Anything readable or tappable in that strip is at risk.

Devices

DEVICE	WIDTH × HEIGHT
Galaxy Z Fold, folded (cover screen)	344 × 882
iPhone SE	375 × 667
iPhone 15	393 × 852
Android phone (Pixel / Galaxy S)	412 × 915
Galaxy Z Flip, open	412 × 1004
Phone, landscape	852 × 393
Galaxy Z Fold, unfolded	882 × 1104
iPad mini, portrait	768 × 1024
iPad Air, portrait	820 × 1180
iPad, landscape	1180 × 820
Laptop 16:10	1280 × 800
Desktop 16:9	1440 × 900
Full HD monitor	1920 × 1080
Ultrawide 21:9	2560 × 1080

BY DEVICE

BY COMPONENT

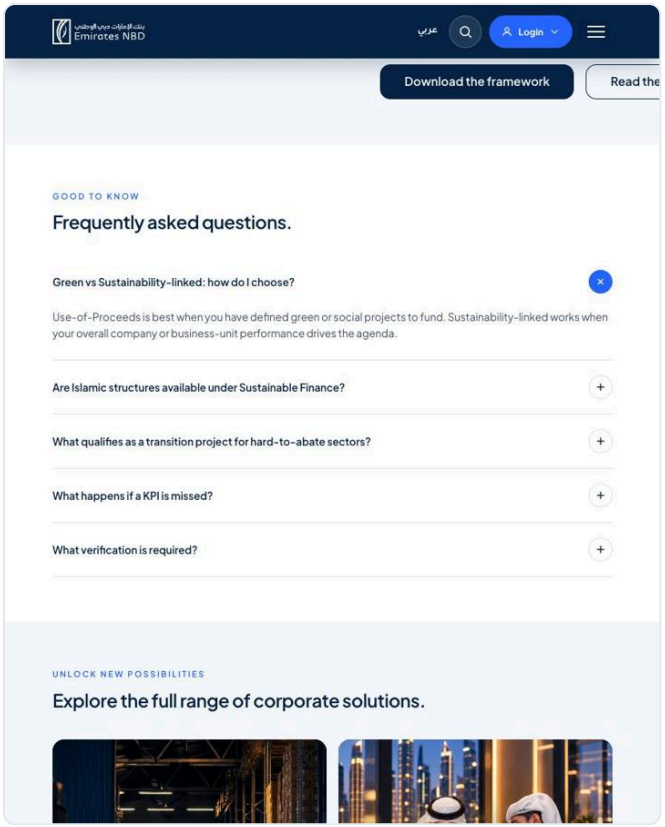

Each fault traced to the section that causes it.

Fixing the master fixes every page that uses it, in both languages.

FAULT	SECTION (MASTER OR PAGE CLASS)	PAGES	DEVICES
Runs past the screen edge (cut off)	`content-block-sidebyside`	3	Phone, landscape, Galaxy Z Fold, unfolded, iPad mini, portrait, iPad Air, portrait
Runs past the screen edge (cut off)	`form-shell`	1	Galaxy Z Fold, folded (cover screen)
Content taller than a full-screen stage	`feature-scroll-story`	6	Phone, landscape
Content taller than a full-screen stage	`synced-slider`	1	iPad, landscape, Laptop 16:10
Under the phone browser bar	`cards-plain-scroll`	16	iPhone SE
Under the phone browser bar	`feature-scroll-story`	6	Galaxy Z Fold, folded (cover screen), iPhone SE, iPhone 15
Under the phone browser bar	`hero-image`	5	iPhone SE
Under the phone browser bar	`hero-cinematic-pinned`	2	Galaxy Z Fold, folded (cover screen), iPhone SE, iPhone 15, Android phone (Pixel / Galaxy S), Galaxy Z Flip, open
Under the phone browser bar	`hf-hero`	2	Galaxy Z Flip, open
Under the phone browser bar	`cmp-hero-cinematic-pinned`	2	iPhone SE
Under the phone browser bar	`cards-scroll`	2	iPhone SE

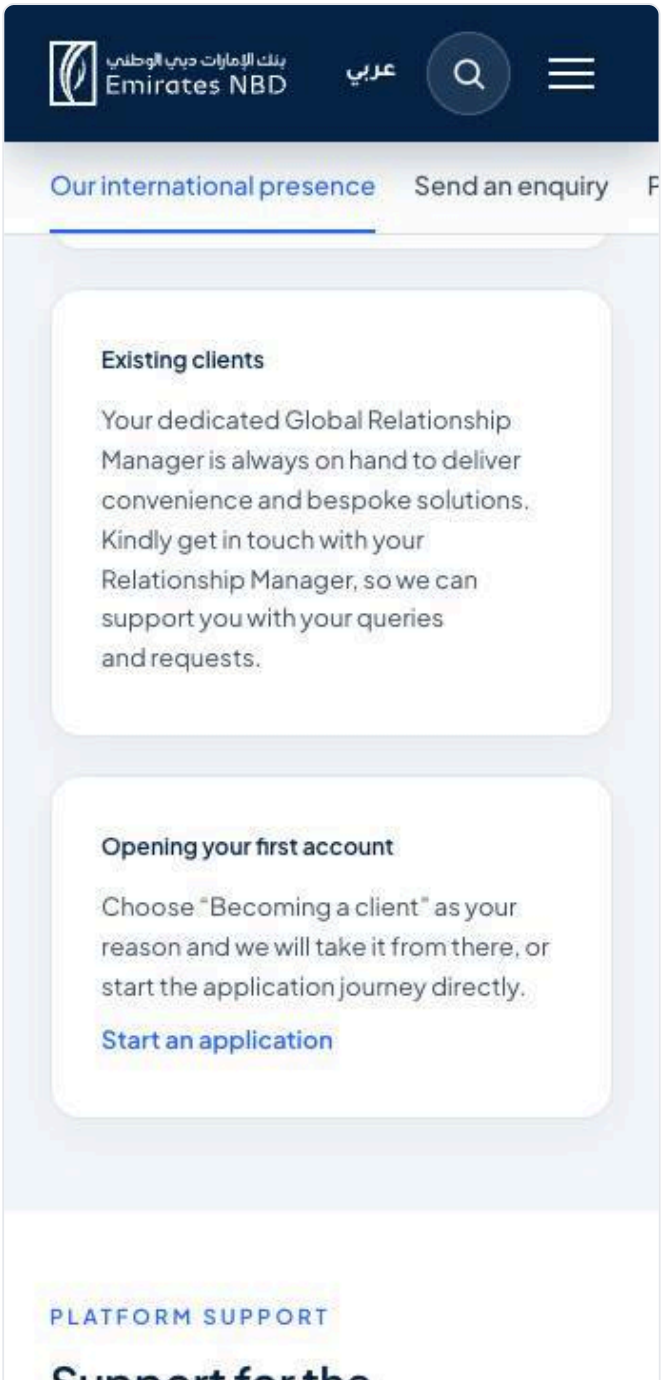

EVIDENCE

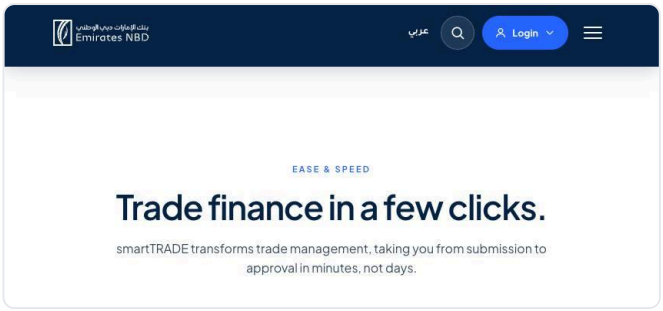

One screenshot per fault.

Runs past the screen edge (cut off) · `content-block-sidebyside`

sustainable-finance-v1a.html on Galaxy Z Fold, unfolded: a.btn.btn-lg.btn-outline (79px past the edge)

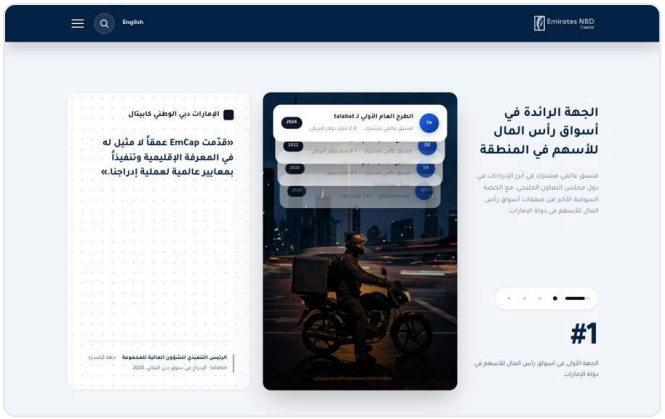

Content taller than a full-screen stage · `feature-scroll-story`

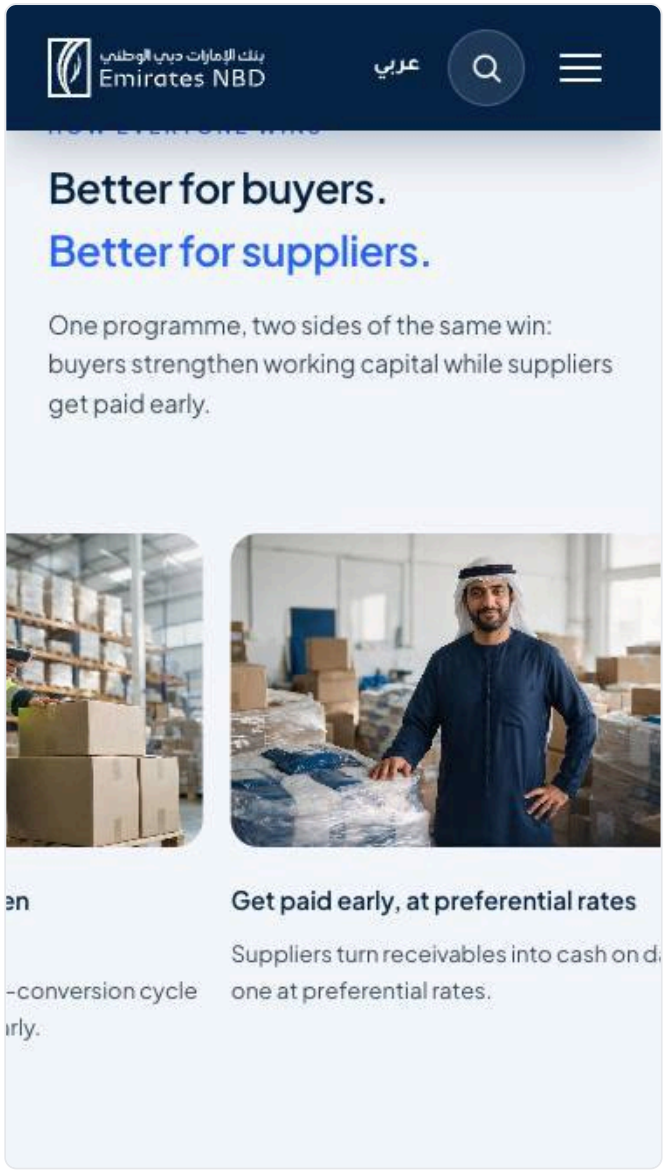

smarttrade-v1a.html on Phone, landscape: div.ess-stage

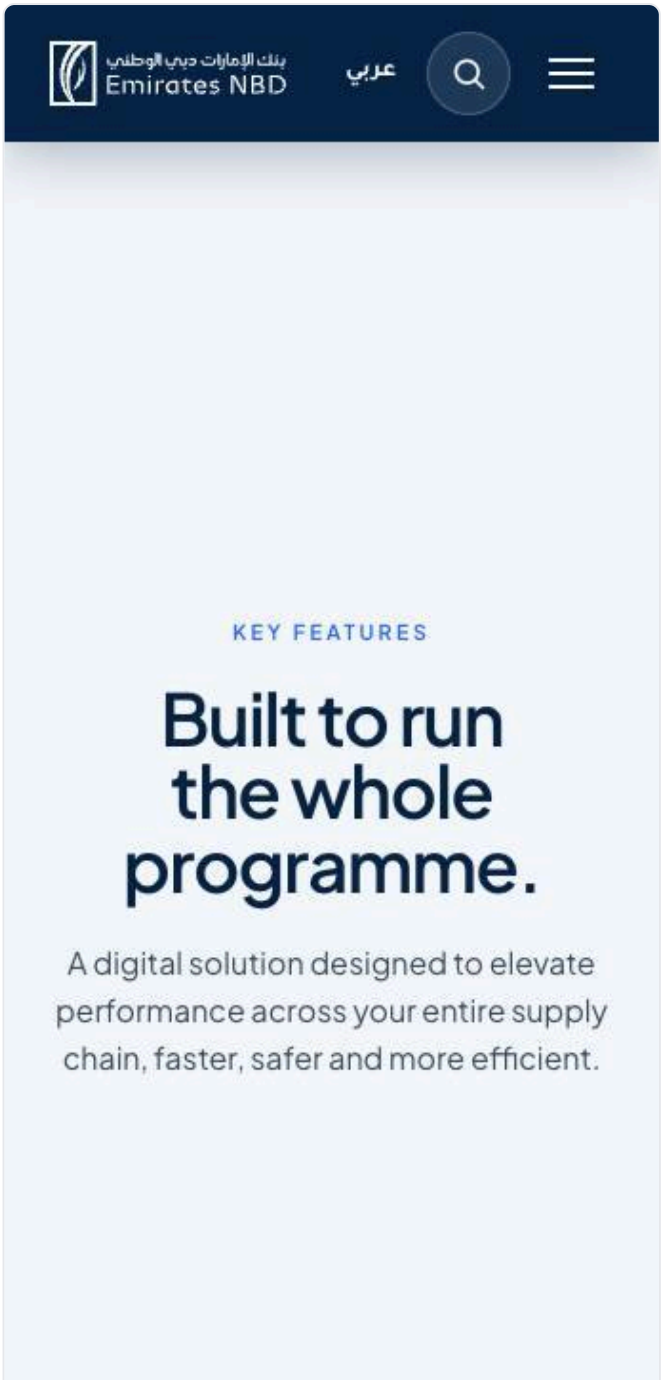

Runs past the screen edge (cut off) · `form-shell`
contact-us-v3.html on Galaxy Z Fold, folded (cover screen): span.ink-accent.type-semibold (32px past the edge)

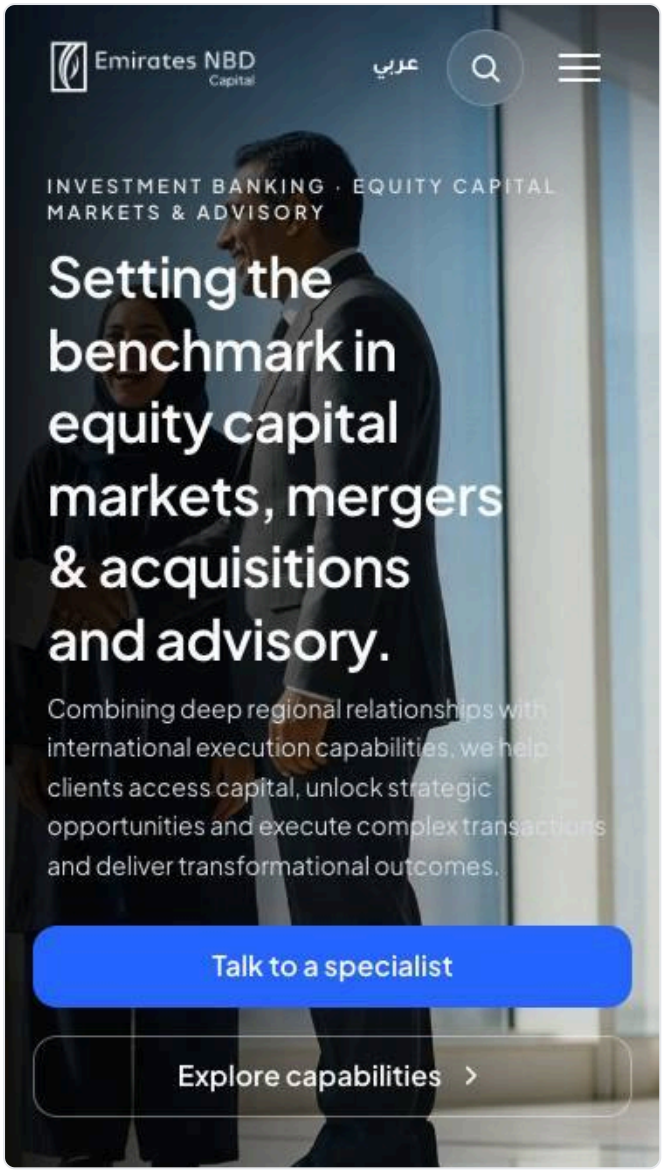

Content taller than a full-screen stage · `synced-slider`
equity-capital-markets-v1a-ar.html on Laptop 16:10: section.cmp.cmp-synced-slider.surface-soft

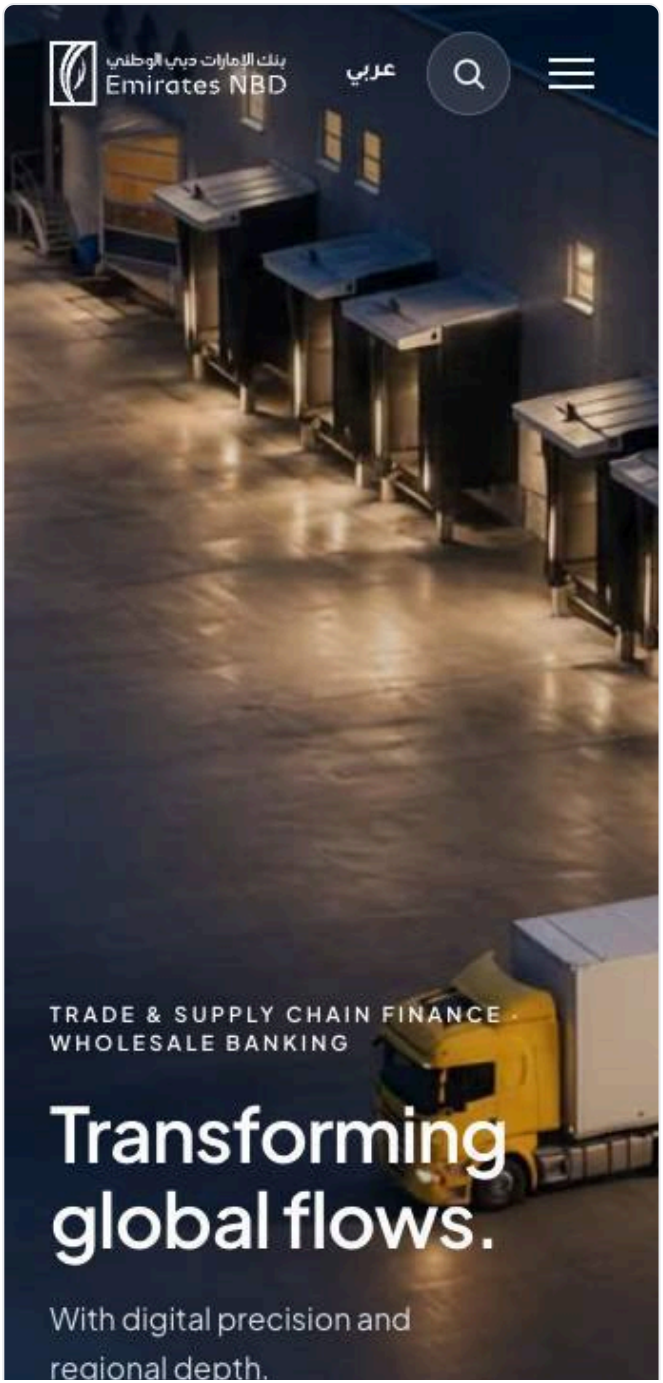

Under the phone browser bar · `cards-plain-scroll`
smartscf-v1a.html on iPhone SE: “Buyers improve their cash-conversion cycle while s” sits 70px from the bottom

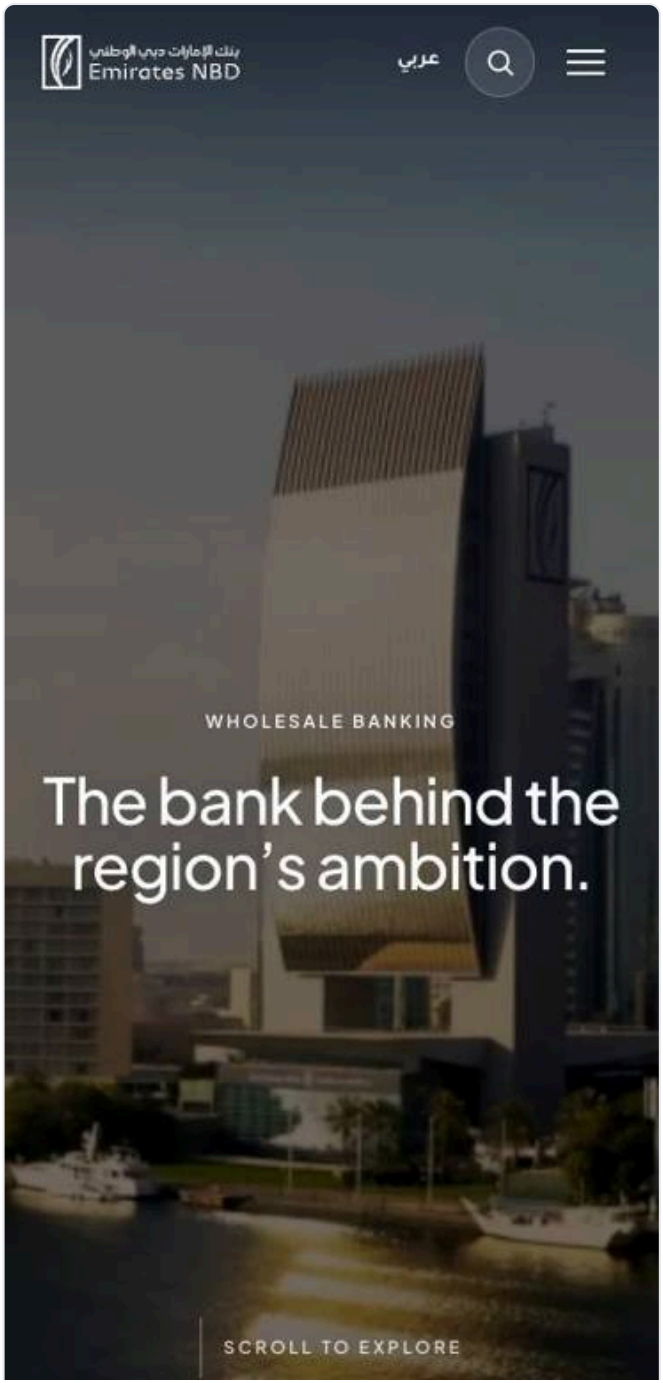

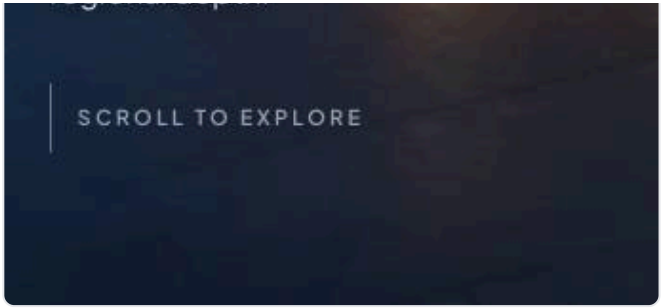

Under the phone browser bar · `feature-scroll-story`
smartscf-v1a.html on Galaxy Z Fold, folded (cover screen): “Request a demo →” sits 84px from the bottom

Under the phone browser bar · `hero-image`
equity-capital-markets-v1a.html on iPhone SE: “Explore capabilities” sits 29px from the bottom

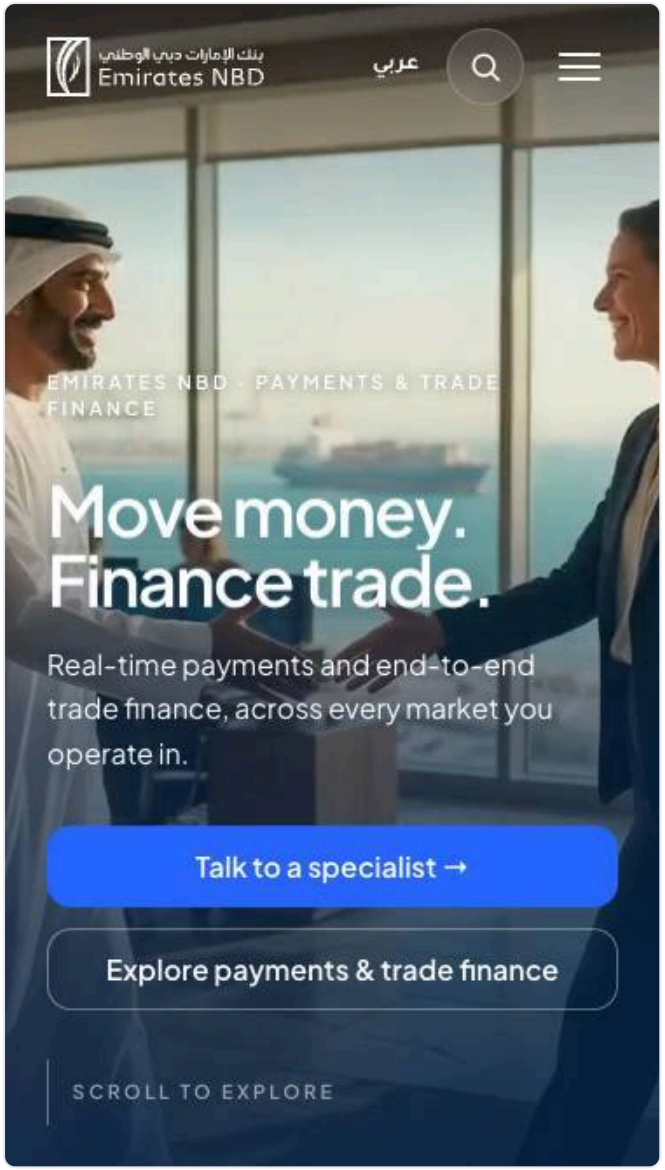

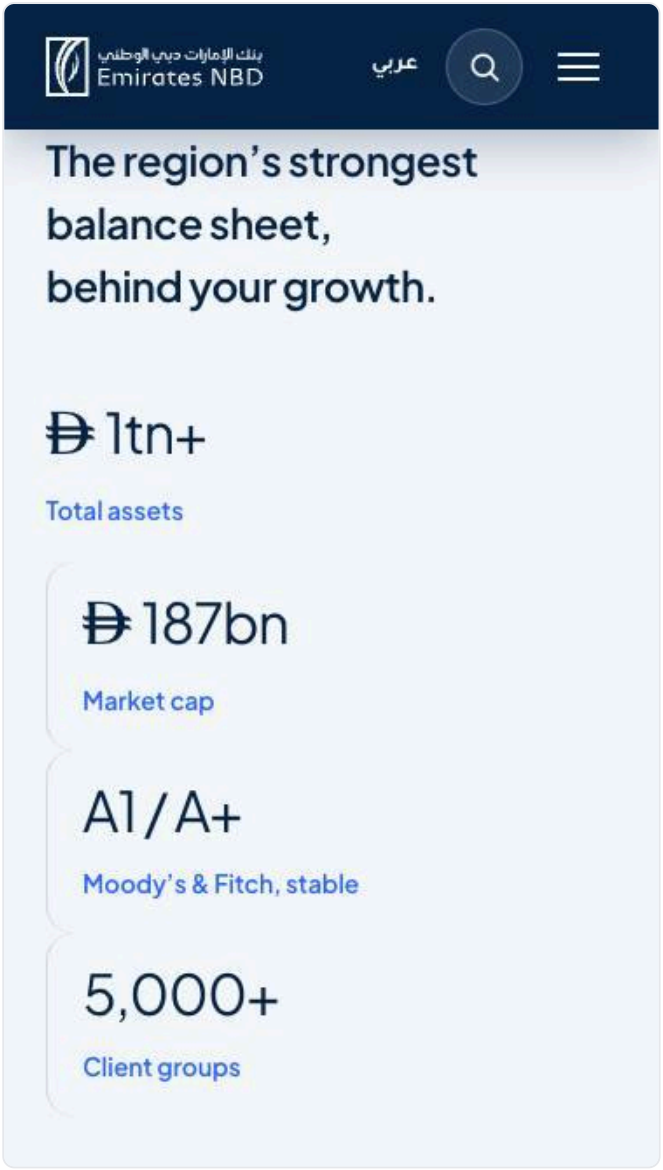

Under the phone browser bar · `hero-cinematic-pinned`
trade-supply-chain-finance-v1a.html on Galaxy Z Fold, folded (cover screen): “Explore smartTRADE” sits 39px from the bottom

Under the phone browser bar · `hf-hero`
cib-home-final.html on Galaxy Z Flip, open: “Talk to us” sits -24px from the bottom

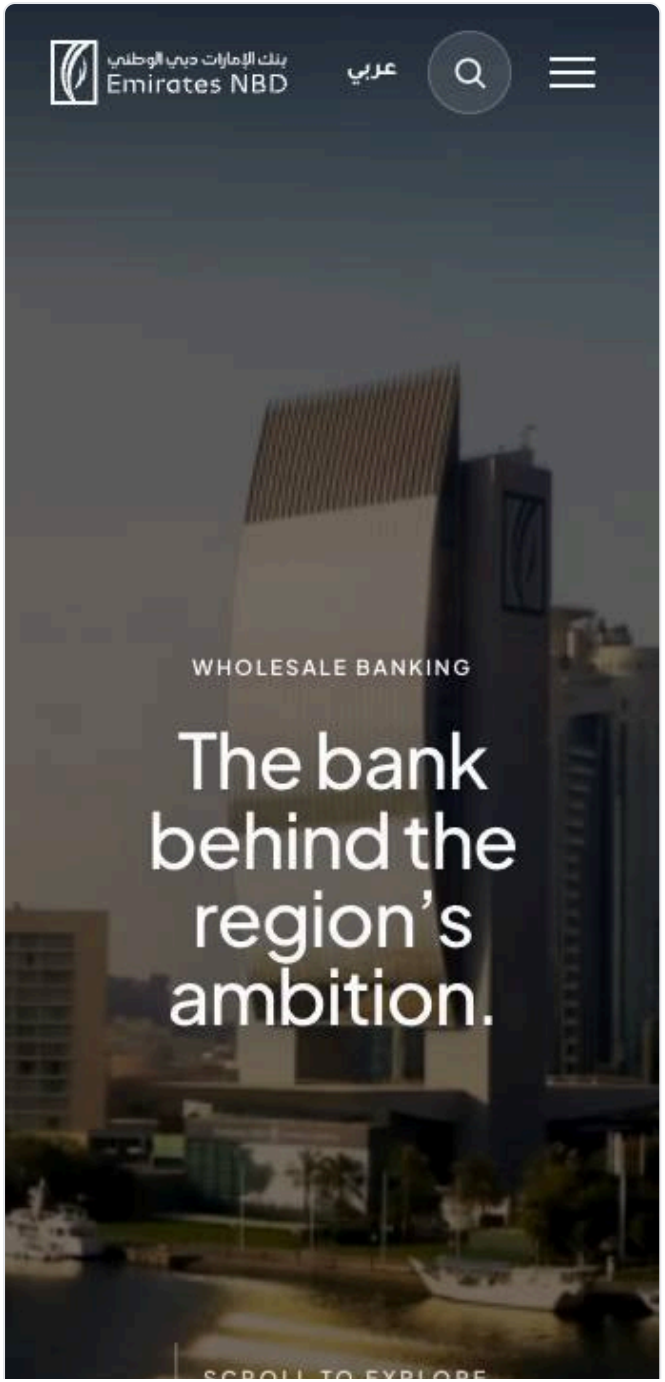

Under the phone browser bar · `cmp-hero-cinematic-pinned`
payments-trade-finance-v1a.html on iPhone SE: “Explore payments & trade finance” sits 90px from the bottom

Under the phone browser bar · `cards-scroll`
lending-v1a.html on iPhone SE: “Learn more about Industry-Specific Finance” sits 0px from the bottom

Laptop 16:10 · 1280×800

Desktop 16:9 · 1440×900

Full HD monitor · 1920×1080

Ultrawide 21:9 · 2560×1080

STEP 2 PREVIEW

40 full-screen height rules still use the old unit.

These are the rules in ds.css that size a section by the screen height (60% or more). 4 already use the phone-safe units. Switching the rest is the core of step 2, and because they live in the masters, every page and the Arabic edition get the fix at once.
